

## **ODOUR and MANURE MANAGEMENT - October 1, 2008**

There have been no problems with the manure management in regards to the Rama Hog Barns. As far as we know there has been no seepage in the surrounding water systems. The farmers surrounding the barns appreciate the fertilizer applied to their land.

It has been difficult to distribute the fertilizer to all who desire it. The land prices have risen due to the fact they can get fertilizer. The manure applied to the land cost \$20 per acre in 2008 and it usually lasts for two years.

The major odour program that was a concern prior to the construction of the barn has not been an issue. There are certain times it is quite bad due to weather conditions and manure application. There have been no complaints so far.
